PROFESSIONAL SUMMARY

ECE graduate with a growing interest in data analytics and a working knowledge of SQL, Python, and Power BI. Experienced in end-to-end data workflows — from data cleaning and SQL querying to building interactive dashboards. Worked on academic projects spanning business intelligence, computer vision, and web development. A quick learner who enjoys turning raw data into clear, actionable insights. Looking to grow in an entry-level Data Analyst role.

TECHNICAL SKILLS

Languages	Python, SQL, Java
Data & Analytics	Pandas, NumPy, ETL, Data Cleaning, Data Wrangling, Exploratory Data Analysis
Visualization	Power BI (DAX, Power Query), Matplotlib, Excel (Pivot Tables, Charts)
CV & Tools	OpenCV, YOLOv8, Tesseract OCR, SORT Tracking, Git, VS Code, PythonAnywhere

PROJECTS

Retail Sales Insights — SQL & Power BI

Aug 2025

Python (Pandas), SQL, Power BI, Jupyter Notebook

- Cleaned and transformed raw e-commerce orders (df_orders) using Pandas — handled missing values, formatted dates, and corrected data types before loading into SQL.
- Wrote SQL queries using CTEs, window functions, and aggregations to uncover top-selling products, monthly/yearly sales trends, category-wise best months, and sub-category YoY growth.
- Built a Power BI report with 8 visuals — including sales by region, profit by category, margin by segment, and a daily sales trend comparing 2022 vs 2023.

Fraud Detection Dashboard — Power BI

Jun 2025

Power BI, DAX, Excel

- Worked with mobile product pricing data; calculated real discount from actual and selling prices and compared against the recorded discount to flag inconsistencies.
- Built DAX measures to automatically mark products as Suspicious when discount mismatch exceeded 1% or selling price exceeded actual price.
- Visualized findings using cards, bar charts, and scatter plots in Power BI; identified Oppo A5 as the anomalous entry in the dataset.

Stock Market Dashboard — Power BI

Jan 2025

Power BI, Excel

- Analyzed 2023 stock data to identify high-value stocks using trend lines, KPI cards, and price movement visuals across multiple symbols.
- Dashboard enabled quick comparison of stock performance to support data-driven investment decisions.

Automatic Number Plate Recognition — Computer Vision

2023

Python, YOLOv8, SORT, Tesseract OCR, OpenCV

- Built an end-to-end pipeline to detect vehicles and license plates from video streams using YOLOv8, track vehicles across frames using SORT, and extract plate numbers via Tesseract OCR.
- Output logged to CSV for downstream use; system designed for integration into traffic management and parking automation scenarios.

EDUCATION

B.E. Electronics & Communication Engineering — Anna University

2022 – 2026

Sri Venkateswara College of Technology | CGPA: 7.51 / 10

Higher Secondary (HSC) — Tamil Nadu State Board

2022

V.H.N Hr. Sec. School | 75.16%

SSLC — Tamil Nadu State Board

2020

V.H.N Hr. Sec. School | 66.66%

CERTIFICATIONS & ACHIEVEMENTS

- Python for Everybody — University of Michigan, Coursera
- Winner — Internal College Hackathon (Image Classification)
- IoT Workshop — IIT Madras
