PROFESSIONAL SUMMARY

ECE graduate with a keen interest in data science, machine learning, and computer vision. Familiar with the end-to-end data workflow — data collection, cleaning, exploratory analysis, and model exploration — through hands-on academic projects using Python, SQL, and Power BI. Comfortable working with structured datasets and visual data pipelines. Eager to develop deeper expertise in predictive modelling and applied ML in an entry-level Data Science role.

TECHNICAL SKILLS

Languages	Python, SQL
Data Science	Pandas, NumPy, Exploratory Data Analysis, Data Cleaning, ETL, Data Wrangling
ML & CV	YOLOv8, OpenCV, Tesseract OCR, SORT Tracking, Scikit-learn (familiar)
Visualization	Power BI (DAX, Power Query), Matplotlib, Excel (Pivot Tables, Charts)
Tools	Jupyter Notebook, MySQL, Git, VS Code

PROJECTS

Automatic Number Plate Recognition — Computer Vision

2023

Python, YOLOv8, SORT, Tesseract OCR, OpenCV

- Built an end-to-end pipeline to detect vehicles and license plates from video streams using YOLOv8, track vehicles across frames with SORT, and extract plate text via Tesseract OCR.
- Results logged to CSV for downstream processing; system designed for integration into traffic management and parking automation scenarios.

Retail Sales Insights — SQL & EDA

Aug 2025

Python (Pandas), SQL, Power BI, Jupyter Notebook

- Cleaned and transformed raw e-commerce orders (df_orders) using Pandas — handled nulls, formatted dates, corrected data types — before loading into SQL for analysis.
- Wrote SQL queries using CTEs, window functions, and aggregations to uncover top products, monthly trends, category growth, and sub-category YoY performance.
- Visualized insights in Power BI with 8 interactive visuals including a 2022 vs 2023 daily sales comparison.

Fraud Detection Dashboard — Power BI

Jun 2025

Power BI, DAX, Excel

- Analysed mobile product pricing data to detect discount inconsistencies — calculated real discount from actual vs. selling price and compared to recorded figures.
- Built DAX rules to automatically flag suspicious entries; identified anomalous pricing patterns and visualized them through interactive dashboards.

Stock Market Dashboard — Power BI

Jan 2025

Power BI, Excel

- Consolidated multi-source 2023 stock data into a unified model; created KPI cards, trend lines, and MoM/YoY comparisons across 15+ symbols to identify high-value stocks.

EDUCATION

B.E. Electronics & Communication Engineering — Anna University

2022 – 2026

Sri Venkateswaraa College of Technology | CGPA: 7.51 / 10

Higher Secondary (HSC) — Tamil Nadu State Board

2022

V.H.N Hr. Sec. School | 75.16%

SSLC — Tamil Nadu State Board

2020

V.H.N Hr. Sec. School | 66.66%

CERTIFICATIONS & ACHIEVEMENTS

- Python for Everybody — University of Michigan, Coursera
- Winner — Internal College Hackathon (Image Classification)
- IoT Workshop — IIT Madras
